

Wisma

Quick Reference Guide for Beta Testers

BETA BUILD · v0.13.1

One place for every warranty, AMC, subscription, insurance policy, and membership.
Everything stays on your phone — no account, no cloud, no subscription.

1. What Wisma tracks

Wisma keeps a record of anything with an expiry, renewal, or recurring service — so it stops living in a drawer of paper or a spreadsheet you forget to update. Every item you add falls into one of five categories:

Category	Typical use	Example subcategories
Warranty	A product's manufacturer/store warranty	Electronics, Kitchen Appliances, Home Improvement
Insurance	Any policy that renews	Vehicle, Property, Health, Electronics, Luxury Items
Subscription	Recurring billed service	Entertainment, Software, Smart Home
AMC	Annual maintenance contract with scheduled visits	RO/Purifier, Electronics, Kitchen Appliances
Membership	Club, gym, or loyalty membership	Fitness, Sports, Travel, Hotel, Shopping

Each item is also tagged **Product** or **Service** — Product shows fields like serial number and retailer; Service skips them. Pick whichever fits (e.g. an RO-purifier AMC is a Product, a housekeeping AMC is a Service).

2. Home screen (Dashboard)

Total items Big number at the top — tap it to see every item, unfiltered.	At risk this month Total value of everything expiring soon, so you can see what needs action.
Active / Due Soon / Expired Three status cards with live counts. Tap any one to jump straight to that filtered list.	Monthly subscriptions All your recurring billing normalised to a monthly figure, regardless of each item's own billing cycle.

3. Adding an item

Tap **Add**. Only **Name** and **Expiry / next due date** are required — everything else is optional and can be filled in later via Edit.

Scan instead of typing

➊ On the Add screen, attach a photo (camera or gallery) or a PDF of the receipt / warranty card / policy document. ➋ Wisma reads the document and tries to auto-fill dates, amounts, and reference numbers. ➌ A message flags which fields were auto-filled — **always check them before saving**, OCR is a starting point, not a guarantee.

AMC-specific fields

When Category is set to **AMC**, two extra fields appear:

- **Visits included per year** — how many service visits the contract covers.
- **Service interval, months** (optional) — how often a visit is expected. Leave blank and Wisma works it out automatically by spreading the visits evenly across the contract period; set it yourself if the vendor has a fixed schedule instead.

4. The item detail screen

Tap any item to open it. What you'll find, top to bottom:

- **Warranty timeline** — purchase date and expiry / next due date.
- **Additional details** — whatever you filled in: serial/model number, retailer, invoice number, billing info, notes.
- **Total cost of ownership** — purchase price plus every logged service cost, with a per-year average.
- **Service history** — every service visit you've logged, with its receipt attached if you added one.
- **Invoice available** — your originally-attached receipt/document, viewable any time.
- **Claim information** (info icon, top right) — a ready-to-copy or ready-to-share summary of the item, handy when calling a vendor for a claim.

Keeping it current

AMC items → "Service tracking"

Shows "X of Y services used this period" and the next expected date. Tap **Log a service** each time the vendor visits — pick the date, optionally attach the receipt (photo or PDF). This does *not* change the contract's expiry date, only the visit count.

Everything else → "Mark serviced / renewed"

For Warranty, Insurance, Subscription, and Membership items. Sets the next due date one year on by default — edit it afterwards if a different renewal length applies.

5. Reminders & notifications

Every item can have its own reminder lead times, chosen from:

- 1 day
- 7 days
- 14 days
- 30 days
- 60 days
- 90 days

Default selection for new items is **30 / 7 / 1 days** before expiry — change the default in **Settings → Reminder defaults**, or override it per item on the Add/Edit screen.

- **Smart warnings:** if repeated repair costs are running high relative to the purchase price, Wisma flags it as a possible replace-vs-repair call.
- **AMC service-due reminder:** fires once the next expected service date arrives, if visits remain for the period.
- **Weekly/monthly digest:** a rollup notification of what's expiring and what's still active — frequency is set in Settings (or turned off).

6. Search, archive & settings

Search

The search bar on the item list matches names and notes — and also text found inside scanned receipts/documents, even if that text isn't in a regular field.

Auto-detect receipts (optional)

Off by default. If turned on in Settings, Wisma reviews newly-taken photos and suggests ones that look like a receipt or warranty card — nothing is ever added without your confirmation, and photos are never uploaded anywhere.

Archive, not delete

Swipe an item to archive it (a 5-second Undo appears). Archived items aren't gone — find, restore, or permanently delete them from **Settings → Archived items**.

Theme

System / Light / Dark, in Settings.

7. Beta limitations — please read

- ⚠ **No cloud backup yet.** Everything lives only on your phone's local storage. Uninstalling the app, or a factory reset, will permanently erase all your items and attachments — there is currently no export or restore option. Please don't uninstall the app during testing unless you're deliberately starting fresh. Google Drive backup is planned for a future release.
- ⚠ **Installing from outside the Play Store.** Your phone will show an "install blocked" or "allow from this source" prompt the first time you open the file — this is expected for any app shared this way, tap through to allow it. If a future update is shared with you, install it the same way; you do not need to uninstall the current version first.
- ⚠ **Receipt capture on "Log a service" is gallery/PDF only** — there's no in-dialog camera option there yet (Add/Edit item still has full camera support). Take the photo with your camera app first, then attach it from your gallery.

8. What we'd love feedback on

- Anything that crashes, freezes, or looks visually broken
- Whether OCR auto-fill got your receipts right
- Whether AMC service tracking matches how your contracts actually work
- Whether reminders arrived when you expected
- Anything confusing or not where you expected it
- Features you wish existed

When reporting an issue, a screenshot plus a short note on what you were doing right before it happened is the most useful thing you can send — please pass it along to Venugopal directly.
